## Software Product Maintenance List

**Effective Date: June 2009**

This document provides information regarding the support status of HP NonStop Server software products. It indicates which support activities are or are not available for individually licensed software products based upon where in its product life cycle that product may be.

The Software Product Maintenance List (SPML) addresses only those services provided to customers under the provisions of a Hewlett-Packard software support agreement. Accordingly, the maintenance level definitions are changed as of April 2003 to reflect this focus on support agreement services.

### Maintenance level definitions

#### ACTIVE:

All customer reported defects are analyzed.  
Repair action taken as appropriate.

#### MATURE:

All customer reported defects are analyzed.  
Repair action taken as appropriate for defects categorized as Critical (i.e. the system or application is down or at high risk; business cannot be conducted, or there are continual failures, or data corruption).

#### LIMITED (formerly Discontinued):

All customer reported defects are analyzed.  
Support actions limited to:  
- Existing fixes provided  
- Workarounds to known problems provided  
- Responses to setup, usage, and configuration questions.

#### OBSOLETE:

The product has reached the end of its service life. No support services are available for the product.  
For SUT-based products, at least 12 months advance notice prior to classifying a product Obsolete will be provided.  
For Independent Products, a minimum of 6 months notice when there is a successor product will be provided.  
For RVU maintenance level, the Obsolete status is equivalent to EOSL for hardware.

The format is comprised of rows and columns: Products are contained in the rows; column headers contain the four statuses. The cell at the intersection of a row and a column contains the date on which the product was assigned the status **Rows with new, updated or future status dates will be highlighted in red bold text to make them easy to identify.**

The dates of some previous status changes are, unfortunately, indeterminate. Therefore, some cells will contain a double asterisk (\*\*) to indicate that the product had been classified to that status sometime in the past.

All status changes beginning July 2000 and thereafter will be dated. A blank cell means that the date on which the product will be classified to the corresponding status has not yet been determined.

This document identifies two levels of products. An HP NonStop Server "T" number identifies a set of code that performs a specific function or set of functions. One or more "T" numbers comprise a "Marketing ID," which is the identifier used for orderable products.

Release version history is included at the end of this document.

<u>RVU</u>	<u>FCS date</u>	<u>Active</u>	<u>Mature</u>	<u>Limited</u>	<u>Support at least through*</u>	<u>Obsolete (EOSL)<sup>†</sup></u>
------------	-----------------	---------------	---------------	----------------	----------------------------------	------------------------------------

\*This date represents the earliest date that the RVU support may become Obsolete.

<sup>†</sup>Twelve (12) months notice will be provided prior to moving an RVU to "Obsolete" (EOSL). When a date appears in the EOSL column, it is a firm, announced date.

NOTE: SUTs are available to customers who have Software Support Contracts at no fee until an RVU is Obsolete. After that time, a SUT for an obsolete RVU may be ordered for a fee.
